Basic Statistics

Report:

Sample and sampling.

- * These analysis are fully based on the given sample.
- * The method of analysing sample data are called method of descriptive statistics.
- * If we employ sample data draw inferences about a population.
- * We are using method of inferential statistics.
- * We use computed sample statistics to draw inferences about the corresponding population parameters.
- * We discuss alternative sample random sampling are:
 - 1) Random multistage clustering
 - 2) Stratified cluster sampling
