Afternoon session

Date - 23 may   Name : Rashmi. K

Course - Python   USN : 4AL18 ECO43

Topic - Syntax   Sem : IV Sem
errors

Repository name - Rashmi. K

Report:

Syntax errors:
* errors of 2 types - Syntax error
                      Expections
    File `error.py`, line 3
      int 999
     syntax error : invaled syntax
* Runtime errors.

Best programing questions?
* title should be error message.
and the code should be copied
    and posted.

error handling :
    a = 1
    b = "2"
    c = 3
print (int(2,5))
print (c/o)

```
def divide (a,b):
    return a/b
print (divide (1,0))
```

error ⇒ zero division error : division by zero.

Application to build website blocker :

* Inside the parenthesis of any() there's another loop that iterate over website list :
  ("face" in "trees are good")
  ("clock" in "trees are good")
  ("trend" in "trees are good")

If any of the above is true then expression is evaluated as true in case none of them is true, show as False.

If you want to return True we call () instead of any()

Schedule a phython program :
1) Sign up for free acc at
         https://www.python anywhere.com.
2) Go to your dashboard. Files upload a file.
3) Go to tasks & set the time of day you want your script to be executed
4) click 'create' button.
