Confidence intervals

* We can defference 2 types of startical interferona methods -
1> estimate population parameters
2> test hypotheses about thair parameter

* In this we can learn that :
1> 1st type of inferential statistics
2> estimation cy means of confidence interval
3>

* A confidence interval is a range of numbers, which mostly contains actual population value.

* Here we show how to construct confidence intervals for means & proportion.

* estimate the value of population parameter in 2 ways :
1> point estimate
2> interval estimate.
